HARISH DHAKE

Pune, Maharashtra, India | harishdhake4@gmail.com | github.com/harishdhake-hd

PROFESSIONAL SUMMARY

BCA student focused on SOC and network security with hands-on experience building NetSentry, a real-telemetry Security Operations Platform using Scapy, FastAPI, React, WebSockets and SQLite. Experienced with packet/flow/DNS telemetry, detection workflows, incident investigation, threat intelligence, asset inventory and MITRE ATT&CK; mapping. Comfortable working across Linux/WSL and Windows with Wireshark, tcpdump and Nmap.

TECHNICAL SKILLS

Security Operations: Network security monitoring, packet/flow/DNS telemetry, detection engineering, incident investigation, threat hunting, response auditing, MITRE ATT&CK;

Security Tools: Wireshark, tcpdump, Scapy, Nmap, Burp Suite, OWASP ZAP

Programming: Python, SQL, Java, JavaScript, TypeScript, Bash

Security Development: FastAPI, WebSockets, REST APIs, React, Flask, Pydantic, SQLite, PostgreSQL

Systems & DevOps: Kali Linux, Ubuntu/WSL, Windows, Docker, Git, GitHub

Databases: SQLite, PostgreSQL, MongoDB, MySQL

PROJECTS

NetSentry — Security Operations Platform | Python, Scapy, FastAPI, React, WebSockets, SQLite

• Built a real-telemetry Security Operations Platform that captures live network traffic with Scapy and normalizes packet, flow and DNS observations.

• Connected packet parsing, flow tracking, DNS parsing and a detection engine to persistent storage and an EventBus for real-time security event delivery.

• Developed REST and WebSocket interfaces for dashboard summaries, packets, flows, DNS, detections, incidents, hunting, investigation, threat intelligence, assets, ATT&CK; techniques and SOAR audit workflows.

• Built a React SOC interface that presents persisted observations for packet, flow, DNS, detection, incident, asset and risk views rather than synthetic network telemetry.

• Implemented a deterministic evidence summarizer for the AI Investigator and audit-safe SOAR handling where unsupported external actions are recorded as not_supported rather than reported as successful.

• Added explicit capture-interface discovery and start/stop controls; the sensor does not silently fall back to invented/demo packets when live capture is unavailable.

• Added automated testing and validation with pytest and a static validation script, plus Docker support for the API/service layer.

SOC Log Analyzer | Python, Log Analysis

• Built a security-focused log analysis project to inspect events and identify suspicious activity patterns.

• Applied Python-based parsing and analysis concepts relevant to SOC triage and investigation.

Network Security Projects | Nmap, Python, Networking

• Developed a port scanner and firewall simulator while practicing TCP/IP networking, scanning concepts and defensive controls.

• Used Wireshark and tcpdump to inspect packet captures and understand protocol behavior and network traffic.

EDUCATION

BCA — PES Modern College, Ganeshkhind, Pune | Expected July 2027

Relevant Coursework: Computer Networks, Operating Systems, DBMS, Data Structures & Algorithms, Python, Information Security, Software Engineering

CYBERSECURITY CREDENTIALS & LEARNING

Centri — Introduction to Network Analysis | Aug 2026

Forage / Mastercard — Cybersecurity Job Simulation | Sep 2026

Forage / Commonwealth Bank — Introduction to Cybersecurity Job Simulation | Feb 2026

Forage / Tata — Cybersecurity Analyst Job Simulation | Sep 2025

Forage / Deloitte — Cyber Job Simulation | Sep 2025
